

Oct 22, 1952

Dear Mr de Paula:-

Thank you so much for
your nice letter regarding "Behind The
Flying Saucers."

Since it is not yet
available in Portuguese, but will be in
the not too distant future, we hope, we
are sending you a pocket book edition of
the American book, and hope it will be
not too hard for you to read it.

With all the very best
wishes,

Yours sincerely,

Jacintho de Paula
R.Dr. Pedro Vicente 323 - P. Pequens

October 24, 1952

Mr. Lester S. Parker,
1615 Oakley Ave,
Topeka, Kansas.

Dear Mr. Parker:-

Thank you so much for your letter of October 16, 1952. As a reader of "Behind The Flying Saucers" you were taken aback by the article in True Magazine. And as a writer of that same book you can imagine how Mr. Scully was taken aback. Especially in view of the fact that the writer of the article made an amazing amount of inaccuracies, lies and libels. Mr. Scully did counter the attack as the article hit the newsstands with press releases and a statement before the newsreels which also hit the TV newsreels coast to coast. Lawyers are preparing libel action.

As for replying in "some suitable" magazine, most respectable magazines do not open their pages to personal fights or even to setting the record straight if some persons have been dreadfully wronged. In fact, even a libel suit is not publicize more than they can possibly help it. It's sort of a closed corporation where they will not give publicity in case they will be on the receiving end another time.

As for bringing the saucer material up to date. That is fine and we have been working on it all summer and have a lot more evidence and intelligent reports from all over the world, but we will have to mop up the snipers before going ahead.

But did it ever occur to you that after you had read through this most violent character assassination, that nothing had been proved - or disproved - about flying saucers, which is after all what he had set out to do?

With all the very best wishes, and thank you for giving your mite to Boys Town. Father Flanagan was a great friend of ours.

All the very best wishes,

Yours sincerely,

October 26, 1952

Dear Miss Ingham:-

Thank you so much for your letter to Mr. Scully. Your science teacher, Mr. Wildgoose, must make your classes very interesting and up to date, with his readings and discussions. As for your doubts about "Behind The Flying Saucers" I don't know what to tell you. We have a lot of data, but to get it all together is quite a lot of work, and months of typing. All I can say is that many people have tried to punch holes in the book, and haven't succeeded. More and more comes evidence to support his claims of flying saucers, little men, and that they are interplanetary.

Just try to imagine how fantastic any new invention or experience might sound to those who weren't there. For instance a writer who'd go with Columbus to discover America and then go back and write about that strange place. Wouldn't people doubt him? And anybody who'd write about a new boat that could go under the water and disappear and then come up again with all hands aboard, must have been considered completely out of his head. But we know these things can be done. Why should it be so impossible for other people on other planets to have mastered the technique and come here? Maybe they used their time to improve technically, while we on this planet have spent most of the time in wars,

Yours sincerely,

October 26, 1952

Dear Miss Green:-

Thank you so much for your letter to Mr. Scully. We are so glad you were so interested in the book "Behind The Flying Saucers." We would very much like to send you some more facts, to dispel yours and your friends' doubts, but it would be quite an imposing manuscript.

So instead of that I would like to tell you that many, many people have tried to knock the story down. They have written letters, and articles in papers and magazines, trying to scatter doubt, but they have yet not been able to prove that any of this was not so. On the other hand we have gotten hundreds of letters proving that flying saucers are so, by their sightings, and some are so interesting it would make your hair stand on end.

With all the very best wishes,

Yours sincerely,

Mrs. Frank Scully

father is prominent in oil business, he might be able to see a map of leases at Rangely Oil Field. I did just recently see the Newton name on quite a lot of leases.

We have not heard any more about the decoding of instruction books found in saucers. There have been more ships that had come into our atmosphere, but no pilot captured to our knowledge. Our scientists have not had much chance to take a ship up to inspect the solar system at closer range.

Dear Mr. Harnstadt:-

Thank you so much for your novel and most interesting letter to Mr. Scully. I am writing you now so you won't wait so long for a letter, to tell you Mr. Scully is sick in bed, with among other things, a bad sciatic attack, so he won't be able to do much about your letter at the moment. I took it upon myself to get your letter read for me down at a recording place, and the engineer as well was most fascinated by your very sharp questions. For answering purposes, however, it would be much easier for us to have the questions on paper, as we then could check them up easier. I did, however, take notes on some of your questions, and will try and answer them, to the best of my knowledge. As for you sticking your neck out, look what Mr. Scully did. And so far, even with the most vicious attacks on his book, nobody has been able to prove that his story isn't so. And we have got an enormous amount of proof that it is true.

The magnetic scientists have come to the conclusion that magnetic propulsion can go twice the speed of light. The 282,000 miles per sec. was inadvertently the wrong number. It should be 372,000 miles per sec.

The frequency that the ham radio operator used (were you thinking of the one in Appleton, Wis.) was not publicized. The radio and its operator were all taken to Washington, where he worked with the government, and might be still working with them on top secret stuff.

How the scientists can cross magnetic lines and live to tell the tale is all restricted. You are right about the fraction of a second which even so can be too much. The definition of a tenescope is also a thing they will not go further into. They felt even that much was too much said.

The number 9 theory is claimed to be worked out perfectly. Mr. Scully doesn't hold completely with it. I asked the same questions you asked about inches and feet and was told it worked out the same way in the metric system. In other word the proportions seem to be correct. In fact, if I can dig up some mathematician's letter confirming this, I will send the data along.

Silas Newton is not a fictional name. If your father is prominent in oil business, he might be able to see a map of leases at Rangely Oil Field. I did just recently and saw the Newton name on quite a lot of leases.

We have not heard any more about the decoding of instruction books found in saucers. There have been more ships that had come into our atmosphere, but no pilot captured - to our knowledge. Our scientists have not had much chance to take a ship up to inspect the solar system at closer range. They only had a few ships long ago, and would you be willing to press a button and not know what would happen if you pressed the wrong one? It could be one to go to some other planet, or it could be one to cross magnetic lines of force on this one or, well if you don't know what it is for, and you do know that once they control such forces and you don't, it would be quite a hazardous affair. Since then also they seem to have improved on their ships to the point that they are more around, and don't crash.

The question as to why the government has kept this as such a long drawn out secret can be answered many ways. They haven't confided in us, but it could be for fear of panic. It could be for a misconstrued fear that it might do something to religion. It might be they don't want to give out information and not be able to explain what it is.

Mr. Scully has never been officially censored or denied. Unofficially there are private individuals who have tried quite a bit of rousting, but so far have not been able to shake the story.

Photographs of flying saucers you could get by writing to Prof. George Adamski, Palomar Gardens, Valley Center, Calif. He is an amateur amateur astronomer, and has made quite some remarkable photographs which are of great interest. I believe you can get some copies at 75 cents a copy or so.

Mr. Scully did try to tell the truth as he believed it. It was no hoax, and he tried hard to weed out the truth as well as new and unknown facts of magnetic energy.

Good luck to your science theme. Let's know how you made it. You certainly are embarking on a fascinating field. The most up to date book on magnetic energy I understand is put out by the Lund University in Sweden. I suspect it is in Swedish however.

Yours sincerely,

Oct. 27, 1952

Dear Mr. Scully;

I have been interested in Flying Saucers for quite some time. I have a few scrap books on Flying Saucer reports. I also have your book "BEHIND THE FLYING SAUCERS", and Keyhole's book "THE FLYING SAUCERS ARE REAL". I belong to some Flying Saucer clubs and subscribe to a lot of magazines. Last night I was going through some True's when I ran across "The Case Of The Mysterious Little Men In The Flying Saucers" By Cahn. Cahn stated that he has talked to you and Newton and that Newton showed him some disks and gears. He also stated that he got ahold of some of the disks and analized them and they turned out to be some substance found on earth. Would you be so kind as to write and tell me if this is true or not. I surly would appreciate it.

I myself, believe there are Flying Saucers, because I think I have seen one, but will not take up your time in stating the discription etc. If you are interested enough in what I have saw, please leave me know.

Please Answer;

Frank:-

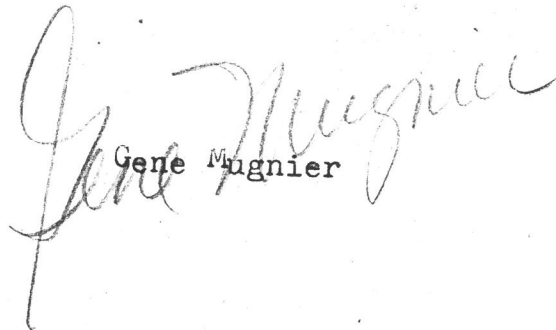

Let me add my congratulations... I just finished reading "Behind the Flying Saucers" It was wonderful.

But one thing-- What the Hell did Napoleon say on page 107?

That bothers me, but not enough that I'm going to study French to riddle it out.

Thanks for latest column copy for The Way.

Father Brendan got back yesterday.

Dear Sir.

I received today your book "Behind The Flying Saucers", which I have asked to you in my letter of the last month. You was very kind attending my answer and I am thank you very much.

Today same I began to read it and I am liking so much, once I unknown many aknowledges contained in it. I have reading many things about the "flying saucers" as in English as in Potuguese but a great quantity of these lectures was inspired in yours book, or translated from it. Mr. Scully I never sow a "flying Saucer", but I sincerely believe they existe and I hope that they will not make hazards to us.

In my last letter I asked to you a book with the condition that I should make a little change of books, magazins or any other thing in agree with your determination. I am liking very much "Behind The Flying Saucers" and I wish that you ask me some thing.

Sincerely

Jacintho de Paula.

Dear Sir:

Permit me to thank you for your kindness in arranging for me the loan of the book "Behind the Flying Saucers."

I am also pleased to say that, after receipt of your letter of Nov. 24th I wrote to Mr. Jacintho de Paula, in São Paulo, and have today received the book.

As to articles published by Luciano Carneiro about you, I have not yet sent any to you because I intend to go through all the older magazines. Anything I find I shall send to you immediately.

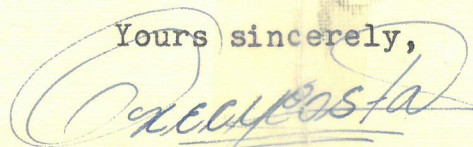

I don't know Mr. Jacintho de Paula personally, but I think he must be a very good friend.

Here I am entirely at your disposal so as to give you any further details that you may require.

I hope you received the Christmas card I sent you a short while ago.

With all the very best wishes, I remain,

Yours sincerely,

Onecy Costa
